

Infosolve Technologies introduces OpenDQ™ Version 2.0, the first open source data quality solution for structured and unstructured data

The Industry's first open source data quality solution for structured and unstructured data with comprehensive data extraction, transformation and loading capabilities

SOUTH BRUNSWICK, NJ -- (October 23, 2007) -- Infosolve Technologies, specialists in providing a wide variety of businesses with efficient, industry-leading data solutions, today announced the introduction of OpenDQ™ V2.0 an innovative data quality solution that addresses both structured and unstructured data quality in a single solution. This solution represents a first in the data management industry, as the only open source based solution to comprehensively address data quality and data extraction, transformation and loading of structured and unstructured data into a single completely integrated solution.

Unstructured data in the form of free text data, word documents, emails and spreadsheets contains valuable data that is often left uncategorized and not integrated by organizations. This is largely due to marketplace solutions focusing on data integration and data quality management of structured data, which only represents approximately 20% of the total data landscape at an organization. Data integration and data quality solutions that address only structured data leave companies with a significant information void in their decision making and create intrinsic inefficiencies in the data analysis process. As business communications continue to evolve utilizing IMs, blogs, and text messaging the stores of unstructured data are increasing exponentially, deepening the void in decision making. OpenDQ™ V2.0 offers enterprises a highly efficient method for comprehensive data integration and data quality management utilizing all types of enterprise data in an organization, leading to accurate and knowledgeable decision making.

“Organizations should be making their strategic business decisions with a full understanding of their data, with OpenDQ™ V2.0, organizations have a highly efficient, data quality and data integration solution that improves decision making and increases an organization’s competitive advantage” said Subbu Manchiraju, Vice President at Infosolve Technologies “ OpenDQ™ V2.0

offers our clients a single source solution to utilize more of their data and gain insight into their business operations in the past, present and future. We see this expansion of Infosolve's solutions as another step in our commitment to help businesses achieve maximum profitability with comprehensive data integration and data quality management solutions.”

OpenDQ™ V2.0, like all of Infosolve Technologies solutions is powered by its Zero Based philosophy, enabling clients to utilize the solution with Zero term commitments, Zero license requirements and Zero upfront hardware investments and Zero defect data™. This Zero Based philosophy coupled with the innovative nature of the OpenDQ™ V2.0 eliminates an organization's need to invest in separate development environments, processes and expensive licenses for structured/unstructured data integration and data quality.

“With OpenDQ™ V2.0 we are continuing our dedication to provide businesses of all sizes innovative, cost effective data integration and data quality solutions that maximize the business value of their data” said Manchiraju. “Organizations should be able to make decisions with the most accurate and comprehensive data available in their enterprise without expensive licenses and disparate processes impeding their progress.”

Infosolve Technologies has assisted the spectrum of businesses from the Fortune 100 to non-profit organizations in maximizing the business value of their data with powerful Zero Based data solutions. Infosolve will expand their suite with new enhancements in the upcoming months, all featuring the Zero Based model.
